System overview

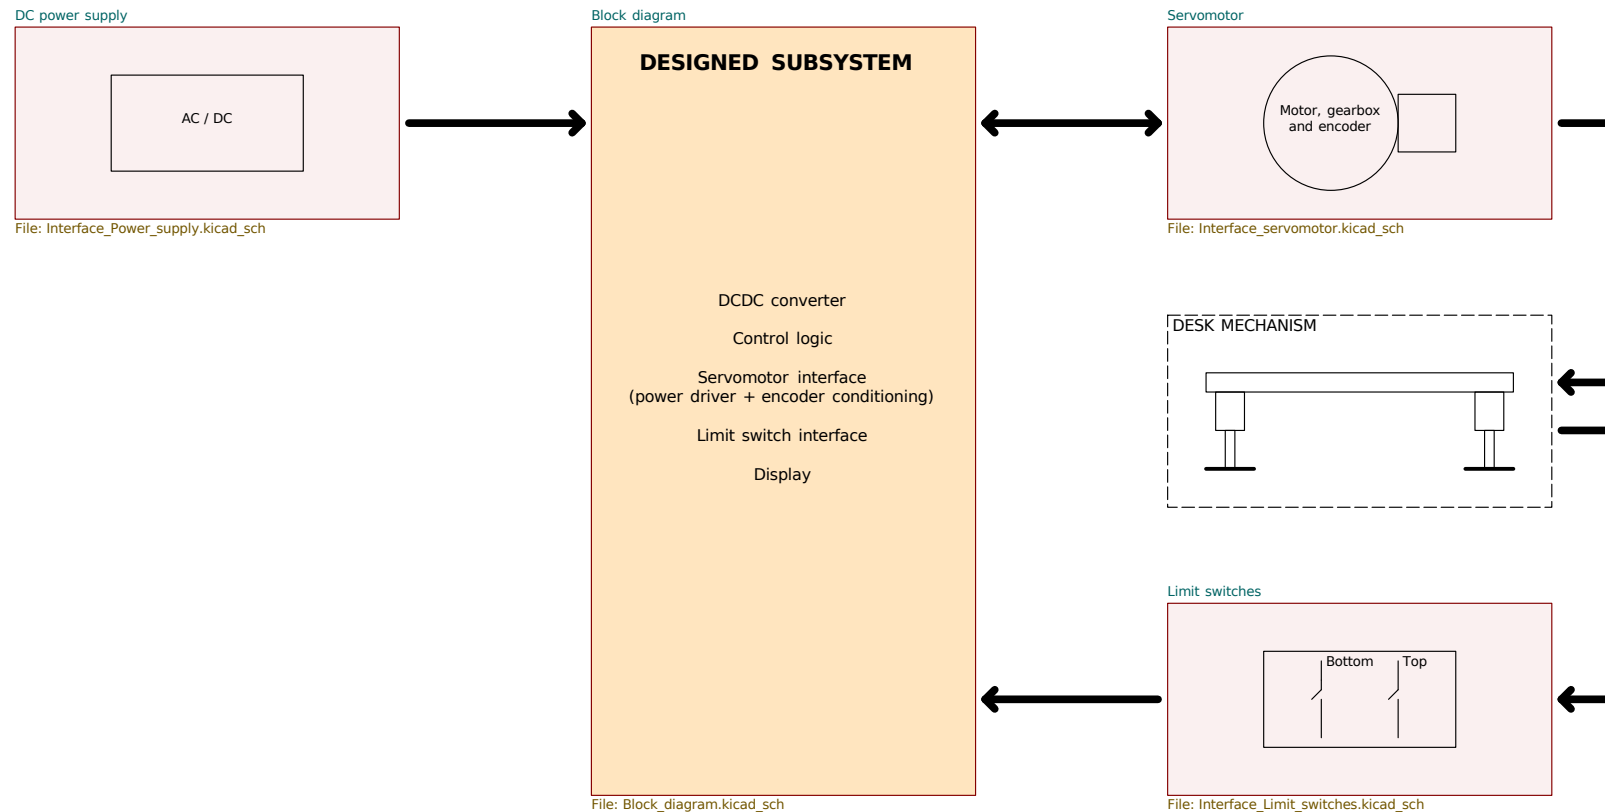

File: System_overview.kicad_sch

Desk controller		Sheet: Root	
Notes		File: ktest.kicad_sch	
		Rev: 1.0.1	Drwn: FLR
		Mat: Concept	Rev'd: FLR
		Date: 2026-10-06	RLs'd: FLR
		Dwg: NA	Size: A4
		Generated with KiCad	Page: 1/11

System overview

This sheet shows the overall system and the interfaces to external components. External components are shown for system context only and are not part of this schematic. Only the "DESIGNED SUBSYSTEM" is covered by this schematic.

DC power supply

Interface specification

Barrel connector (Dell type, with ID pin)

- Pin
- 1 Supply - 19.5 V, 3 A (inner shell)
 - 2 ID (internal pin)
 - 3 GND (outer shell)
 - SH Shield

Interface specification

JST B6B-XH-A / JST XHP-6 connector

Pin	Description
1	Encoder B output (VCC)
2	Encoder A output (VCC)
3	GND
4	VCC (3.3 - 5V)
5	Motor B (3 A, 12-24 V)
6	Motor A (3 A, 12-24 V)

Limit switches

Interface specification

JST B4B XH A / JST XHP-4 connector

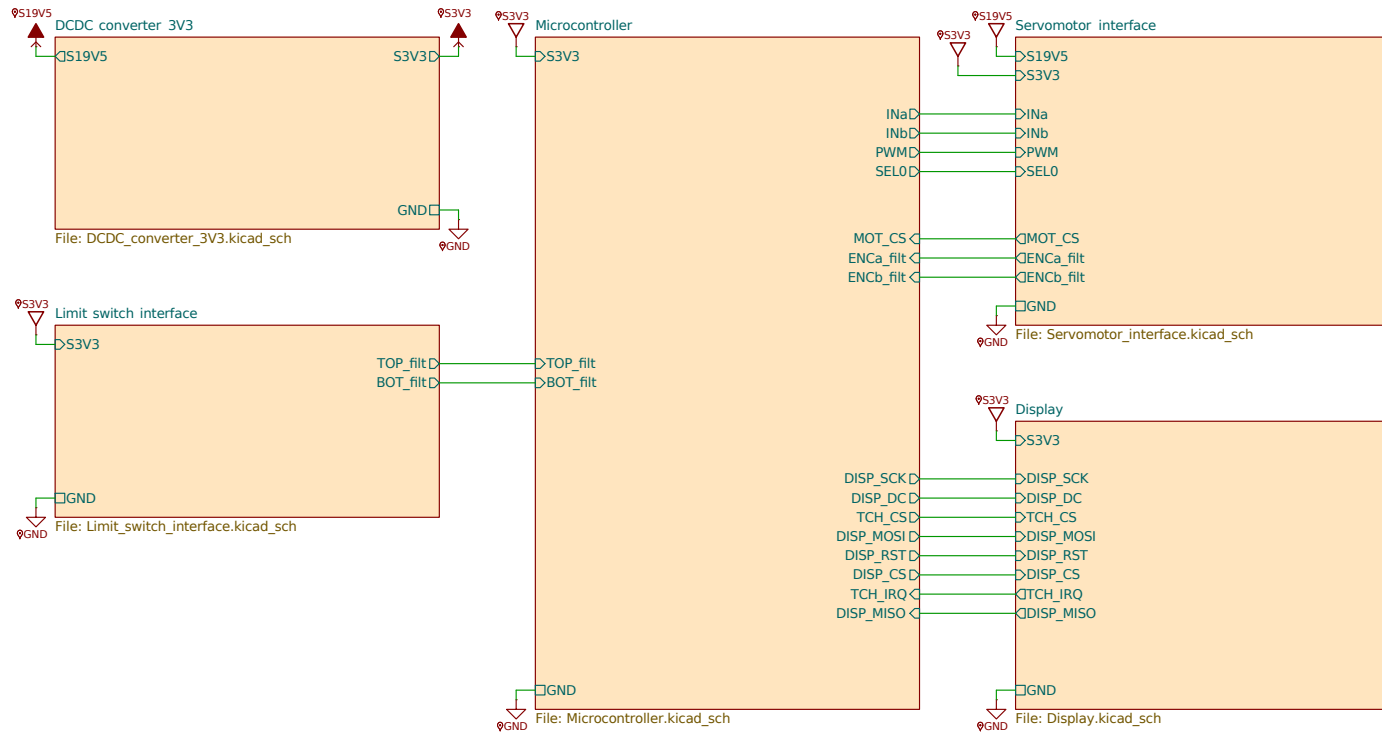

Pin Description

- 1 Bottom limit switch (Normally open, switch closes to GND)
- 2 GND
- 3 GND
- 4 Top limit switch (Normally open, switch closes to GND)

DCDC converter 3V3

Block interface

J6 is fitted to a small "standalone" PCB which will then be soldered into the "main" PCB. This standalone PCB + connector are what make the "DC barrel assy" used in J8 position.

Dwg: NA	Size: A4
Generated with KiCad	Page: 10/11

Display

The display will not be directly soldered to the PCB. Instead, generic 2.54 mm pitch sockets J2 and J3 will be used as connectors.
